

Collaboration and Leadership Reflection

Identify at least one best-practice leadership strategy from the literature that you believe would improve an interdisciplinary team's ability to achieve its goals. Include the source and rationale for your choice of strategy.

Change is often a necessary [bha fpx 4008 assessment 2 financial statement analysis](#) of any organization. However, it can be challenging to measure its effectiveness.

MSN FPX 6021 Change Strategy and Implementation

MSN FPX 6021 Change Strategy and Implementation introduces learners to advanced theories, research, and best practices in nursing leadership and administration. Learners apply research skills to examine and assess nursing leadership roles and responsibilities, analyze health care trends and challenges, and address and respond to issues related to patient safety, quality of care, finance, and operations in the context of interprofessional team collaboration. Throughout this specialization, learners build upon their characteristics as leaders, visionaries, and risk takers while expanding their knowledge of the complexities in implementing health care change.

This course is a required course for the MSN [NURS FPX 4050 Assessment 3 Care Coordination Presentation](#) Leadership and Administration specialization and is part of the Health Care Policy Track. This track offers a unique combination of rigorous coursework and real-world application through field placements that allow learners to develop their professional portfolio in preparation for their career goals.

NURS FPX 4010 Assessment 1

Nursing is a difficult class, and many students struggle to pass it. However, you can improve your chances of passing by being proactive and using academic help services. In addition, studying in small increments each day can also make it easier to retain information.

The Vila Health scenario demonstrates the importance of interdisciplinary team collaboration to project success. In this case, the implementation of an EHR system at a nursing facility was a failure because it did not take into account the needs of nurses and other stakeholders. In addition, the project team did not address conflicts and disagreements between staff members.

Nursing informatics helps [nurs fpx 6021 assessment 2 change strategy and implementation](#) patients' safety by reducing clinical errors and facilitating the exchange of information. It can also include healthcare education, wearable devices that monitor vital signs, and supplier to-supplier communication. In order to be effective, nursing informatics must be supported by interprofessional collaboration and leadership. This is especially true when implementing an EHR.

COM FPX 3700 Assessment 3

In the healthcare field, conflicts are often a sign that a current process or policy needs to be changed. A successful change management strategy includes conflict resolution techniques to prevent misunderstandings, disagreements or outright hostility. Conflict resolution strategies [POLI 330N Week 7 Assignment Final Project Policy Issue](#) designed to promote an environment of respect and trust, which can lead to more productive workplaces.

COM FPX 3700 Assessment 3 is an opportunity for students to create a safety improvement plan with a group of interprofessional health professionals. The course focuses on conducting a root cause analysis of an incident and creating a safety plan to address the issues. The class also examines how power and conflict influence the process.

Effective interprofessional collaboration energizes the full contribution of each discipline in patient care and cultivates regard for the disciplinary commitments of all medical services professionals. It also supports clinical decision-making and enhances support for interprofessional [NR 504 Week 3 Reflective Essay](#). To foster this type of collaboration, it is important to set up a clear chain of command and promote an environment of respect and trust.
